SUMMARY

React Native Developer with hands-on experience building, shipping, and maintaining cross-platform mobile applications for Android and iOS using React Native and TypeScript. Skilled in developing scalable mobile architectures, integrating REST APIs, implementing app monetization through Google Mobile Ads and subscriptions, and managing application state using Context API and AsyncStorage. Experienced in building AI-powered features, authentication flows, persistent local storage, and responsive mobile user interfaces. Passionate about writing clean, maintainable code and delivering polished, user-friendly mobile experiences.

EDUCATION

University of Engineering and Technology, Mardan

Bachelor of Computer Software Engineering

2022 – 2026

EXPERIENCE

App Developer

Jun 2025 – Aug 2025

Quantum Lab AI

Rahimabad, Pakistan

- Engineered cross-platform mobile applications for Android and iOS using React Native and TypeScript from a single codebase.
- Integrated AI-powered REST APIs to automate content generation and improve in-app user engagement.
- Designed and implemented responsive, interactive UI components optimized for multiple screen sizes.
- Implemented persistent local storage using AsyncStorage to save user progress and preferences across sessions.
- Added sound effects, haptic feedback, and smooth navigation to improve overall application usability.
- Collaborated with the development team to plan features, debug issues, and deliver production-ready builds on schedule.

PROJECTS

Tasbeeh Counter App | React Native | TypeScript | AsyncStorage | Context API | Google Mobile Ads

- Built and published a digital dhikr and tasbeeh counter application for Android users.
- Implemented customizable dhikr counters with full CRUD functionality for adding, updating, resetting, and deleting saved dhikrs.
- Used Context API for global state management of dhikr data and count tracking across screens.
- Used AsyncStorage for persistent offline storage of user-created dhikrs and progress.
- Integrated Google Mobile Ads monetization using Native Ads, Interstitial Ads, and Rewarded Ads.
- Built smooth screen transitions and navigation using React Navigation.
- Designed a clean, distraction-free interface with dark mode and progress tracking.

AI Meme Generator | React Native | TypeScript | Firebase | REST APIs | RevenueCat

- Built an AI-powered mobile application that automatically generates memes using AI-generated captions and user images.
- Integrated AI APIs for intelligent caption generation, reducing manual meme creation effort.
- Implemented Firebase for cloud data and image management.
- Integrated RevenueCat to manage in-app subscriptions and premium feature access.
- Implemented Google Sign-In authentication for seamless user onboarding.
- Integrated Google Mobile Ads monetization using Native Ads, Interstitial Ads, and Rewarded Ads.
- Built navigation flows and screen transitions using React Navigation.

- Delivered a fast and user-friendly content creation experience optimized for engagement and sharing.

TECHNICAL SKILLS

JavaScript (ES6+)
TypeScript
React Native
Expo
React Navigation
AsyncStorage
Context API
Responsive Mobile UI Design
REST API Integration
AI API Integration
RevenueCat Subscription Integration
Google Sign-In
Google Mobile Ads SDK
Native Ads
Interstitial Ads
Rewarded Ads
Subscription-Based Monetization
Firebase
Firestore
Firebase Storage
Git
GitHub
Debugging
Testing
Version Control

LANGUAGES

English Urdu Pashto
